

Toyota Forklift

Toyota Forklift Training Markham - Since 1992, Toyota Material Handling inc., U.S.A., also known as TMHU, has been the top selling lift truck supplier in the U.S. This business has been situated out of Irvine, California for well over 40 years, providing a wide-ranging line of quality lift trucks. With a distinguished reputation of durability and reliability, Toyota lift trucks have thrived in the competitive resources handling market. Quality is the keystone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S. are manufactured here.

All Toyota machines and parts manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant improvement, and its environmental systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70% less smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and policies.

TMHU, U.S.A.- Leading the Industry

Brett Wood, President of TMHU, links Toyota's achievement to its strong dedication to fabricating the finest quality lift trucks at the same time as delivering the utmost customer service and assistance. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's leading lift truck provider and is among the magazines prominent world's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not a lot of other corporations and no other lift truck maker can meet Toyota's record of protecting the environment while simultaneously encouraging the economy. Environmental accountability is a fundamental aspect of corporate decision making at Toyota and they are proud to be the first and only manufacturer to provide UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

Toyota first released the 8-Series line of lift trucks in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission values, and California's more environmentally friendly emission standards. The end invention is a lift vehicle that creates 70% fewer smog forming emissions than the present Federal standards tolerate.

Also starting in 2006, together with the Arbor Day Foundation, Toyota added to its dedication to the environment. To this day more than 58,000 trees have been embedded in the ground throughout state forests and neighborhood parks that were damaged by fires and other natural causes. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of dealers to non-profit organizations and local consumers to help sustain communities all over the U.S.

Industry-Leading Safety

Toyota's lift trucks offer superior efficiency, visibility, ergonomics and durability, and most importantly, the industry's leading safety technology. The company's System of Active Stability, also known as "SAS", helps decrease the chance of incidents and injuries, and increasing productivity levels while minimizing the potential for product and equipment breakage.

System Active Stability senses numerous conditions that could lead to lateral instability and likely lateral overturn. When one of those factors are detected, SAS immediately engages the Swing Lock Cylinder to steady the rear axle. This alters the lift truck's stability footprint from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to prevent injuries or accidents while adding strength.

The SAS systems were originally adopted on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped push Toyota into the lead for industry safety standards. Now, SAS is utilized on almost every modern internal combustion products and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in action, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with compulsory worker instruction, overturn fatalities across all designs have decreased by 13.6% since 1999. Also, there have been an overall 35.5% decrease in industry wide collisions, loss of control, falls and overturn from a lift truck for the same period.

Toyota's pattern of brilliance reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training curriculum to help purchasers meet OSHA standard 1910.178. Instruction services, videos and various resources, covering a wide scope of topics-from personal safety, to OSHA policies, to surface and cargo conditions, are available through the vendor network.

Toyota's U.S. Commitment

Toyota has sustained a permanent existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift truck. This fact is demonstrated by the statistic that 99% of Toyota lift trucks bought in

America at the moment are built in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of property. Facilities include a National Customer Center, as well as production operations and distribution centers for equipment and service parts, with the total commitment exceeding \$113 million dollars.

The modern NCC was built to serve TMHU clients and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an section for live merchandise demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a education center.

First in Client Satisfaction and Service

The NCC embodies Toyota's commitment to offering top-notch client service. TMHU's 68 authorized Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations all over the U.S, provide the most complete and inclusive customer service and support in the industry. The company's new and Certified Used lift trucks, service, parts, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall consumer satisfaction.
