

## Markham Overhead Crane Certification

Markham Overhead Crane Certification - The overhead crane training certification course is designed to be effective with all participants regardless of literacy or language limits. The program has two parts: a practical training session and a classroom training session. Upon successful completion of both sessions, the participant would be certified. Each and every graduate would receive a wallet certificate of achievement. The program is designed to provide a basic knowledge of the efficient and safe utilization of overhead cranes.

The crane operator training program has three main objectives: to teach the basic concepts involved in the operation of jib cranes, overhead cranes and gantry cranes; to produce competent operators trained well in safety problems; and to lessen the possibility of incidents and equipment damage.

The overhead crane is a common heavy machinery utilized in industrial environments. This equipment is known as a bridge crane and consists of parallel runways spanned by a traveling bridge. The hoist is the component which lifts materials. The hoist travels along the bridge.

The overhead crane when used for manufacturing or maintenance applications will offer more efficiency compared to a mobile crane. This kind of crane is also commonly used in the steel industry. Steel is handled with an overhead crane at each and every phase of the manufacturing process, from the time the raw materials are poured into the furnace until the finished coils are lifted onto trucks and trains.

The overhead crane could also be found in the auto business and paper industry. The bridge cranes can help remove the heavy press rolls and other machines at paper mills. Bridge cranes are utilized to install the heavy cast iron paper drying drums and various massive equipment utilized in paper mills.
